On Open Source Software Avadis Hacinliyan

CIS, Yeditepe University

Abstract

The aim of this lecture is to introduce and discuss open-source software, present criteria for open source, compare it to closed source, presenting the advantages and disadvantages of each. The history of the open-source movement, including Richard Stallman and the Free software concept, the GNU Project, will be reviewed. Examples of popular open-source software such as programming languages, the world wide web, operating systems with particular emphasis on Linux and office suites will be mentioned. Networking and multimedia applications will be recalled. The commonly used licensing schemes and their gradual evolution towards proprietary forks controlled by corporations such as evolution of the Android system (Google) and the Java language (Oracle) will be mentioned.

Biography

Born in 1944 in Büyükada and completed primary school there in 1955 and graduated from Robert College Secondary (1960) and High School (1963). He received his BS degree from Robert College (now Boğazici University) Department of Physics and his MS and PhD degrees from The University of Chicago, with Fulbright and Enrico Fermi scholarships.
