Perspective on Generative AI – the Present State and the Future

Associate Prof. Levent Mollamustafaoğlu

Boğaziçi University (Retired)

Abstract

Generative AI has quickly moved from the specialist research area to the frontline news in a few months with the release of consumer-targeted systems. This talk will give a snapshot of the current situation, which changes continuously and then it will provide a look into the future of this sub-genre of AI. The talk will also provide first-hand experience on a number of Generative AI tools.

Biography

Dr. Mollamustafaoğlu completed the Mathematics and Industrial Engineering programmes of Boğaziçi University and got MS and Ph.D. degrees in Industrial Engineering from the same university. He started up Logo Software and led its software team for the initial 5 years.

Joining the faculty of Boğaziçi University, he worked as a postdoctoral researcher at Harvard University.

He joined an IT organisation in the Netherlands and did software development, project management and contractor management for international software competition contracts for 25 years, retiring in 2021.

He is currently involved in developing iOS software and working on historical novels.
